

# PREVENTATIVE MAINTENANCE SERVICE PLAN

## PM KIT Benefits

- Minimize costly unscheduled downtime
- Eliminate the need for expensive expedited shipments of parts
- Leverage preventive maintenance (PM) installations as a training opportunity for maintenance personnel
- Reduce the reliance on stock parts for unexpected downtime
- Offer weekly service rates instead of higher weekend rates (with a service plan)
- Establish a standard cost for PM services to avoid unexpected expenses
- Achieve savings on last-minute travel expenses for technicians (flights, hotels, etc.)

## Invest in the longevity of your production

Tomahawk's Preventative Maintenance Kits are a great way to improve the longevity of your forming system and keep it running great for years to come.

Tomahawk is always striving to ensure that its customer's forming equipment is performing properly and that their staff are fully trained on forming operations to maintain consistent daily production demands. Installing preventative maintenance kits is a big part of this initiative to better serve you and your daily operations.

Setting up an annual service plan allows us to schedule service trips in advance to customers facilities, resulting in significant savings. Often these trips are planned on weekends, so that it does not disrupt daily production. Weekend service rates are higher than rates during the week. As part of setting up an annual service plan, Tomahawk would like to offer the option of installation of PM Kits during the weekend, at the rates generally charged during the week.

***For pricing and more details on our PM kits, please contact us and we'd be happy to get you started.***
